Drilling Training

With oil having dropped below $40 at the time of writing (its $39.51 on 3rd August 2016) one way in which Operators can save on cost is to have fully-trained Drilling Engineers, Drilling Supervisors, Drilling Superintendents and Drilling Managers. Also, they should ensure that their Drilling Contractors are superbly trained too – at least from Assistant Driller & Driller up to Toolpusher and OIM level.

This should ensure that the Operator's wells are drilled cost-effectively and without incident and that the Drilling Contractor becomes the Drilling Contractor of choice – rather than one of lowest bid. IDEAS Training Courses are designed for both Operators and Drilling Contractors: too boost understanding, performance and reduce the bottom line.

Optimal Drilling Training involves a variety of considerations, ranging from the students backgrounds, their drilling experience and of course their intended job function.

It is also possible to “tailor-make” training programs for both Operators and Drilling Contractors alike depending upon their bespoke requirements. We have been delighted to do this for several Operators and Drilling Contractors over the years with excellent results.

Onsite Training
Drilling Training

IDEAS (Independent Drilling Engineering Associates) carries out Drilling Consultancy and Training Services to the highest standards, with the absolute best people in their areas of expertise to serve you quickly, optimally and professionally.

With a typical minimum of 35 years combined field and onshore experience, our expert Consultants and Trainers bring a wealth of experience to your rigs, projects and classrooms.

Our work ethics, practices and training materials are all based upon the extremely high standards published by API, IADC, SPE, NACE, IADC Wellsharp, IADC Wellcap Plus, IWCF and IOGP.

It is also possible to “tailor-make” training programs for both Operators and Drilling Contractors alike depending upon their bespoke requirements.
